PROFESSIONAL SUMMARY

Full-stack Software Engineer (B.Tech CSE – AI/ML, Class of 2027, CGPA 9.0) who writes clean, maintainable code across web applications and backend services, from design through testing and deployment. Debugs production issues, documents technical specs, and works through Agile/Scrum sprints, code reviews, and cross-functional collaboration with product and QA — independently or as part of a team. Strong in data structures, algorithms, and OOP, with hands-on Git and AI coding-agent workflows (GitHub Copilot) to move fast without cutting corners.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design, Agile (Scrum), Git/Version Control, RBAC
Frontend: React.js, React Native, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, FastAPI, Django, REST APIs
Databases: PostgreSQL, MongoDB, Firebase, Supabase, SQLite, SQLAlchemy
AI & Automation: LLM APIs (Gemini, Claude, OpenAI, Mistral), Agentic AI Pipelines (LangGraph/LangChain), RAG, GitHub Copilot, n8n, Docker

PROFESSIONAL EXPERIENCE

AI Engineer — rkitect.ai
May 2026 – Sep 2026 | Remote

- Built and shipped rkitect Marketing Automation (Python, n8n, Gemini API), an agentic pipeline that autonomously generates, publishes, and monitors brand content on LinkedIn/Twitter.
- Developed a SketchUp rendering plugin that consolidates multiple viewpoints into a single unified view and generates instant 360° panoramas directly from SketchUp project files.

Software Engineering Intern — Guppshupp
Jun 2026 – Jul 2026 | Remote

- Designed and built a full internal CMS from scratch (Django, React) — content modeling, publishing workflows, RBAC — and documented technical specs (PRD, tech spec, agent orchestration docs) for cross-functional handoff to product and QA.
- Shipped end-user features on the company's React Native app end-to-end — implementation, testing, code review — and debugged a BigQuery/Redash metrics issue, tracing outlier p100 values to backgrounded app sessions.

Operations Lead — Valentine Photo Booth
Feb 2026 | Jaipur, India

- Ran a 3-day pop-up event generating Rs. 16,000 revenue from 80+ groups; built a custom image-capture and print pipeline that cut turnaround time by 40%.

Full-Stack Developer — Campus Hub, Manipal University Jaipur
Feb 2025 – Nov 2025 | Jaipur, India

- Contributed to a live MERN-stack platform (15,000+ users) for event booking and food ordering, implementing JWT authentication and RBAC and working through Agile sprint ceremonies.

PROJECTS

TradingAgents — Paper-Trading Platform for Indian Equities
Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, LangGraph/LangChain, Protocol Buffers, pytest, Docker

- Architected an event-driven backend pairing a deterministic 5/15-minute market scanner (liquidity, VWAP, ATR, breakout signals) with a multi-agent LLM research layer, so only shortlisted high-conviction candidates reach costlier analysis.
- Built a Pydantic/FastAPI control plane enforcing risk-gated trade-intent validation — price freshness, position/loss limits, idempotency, and an immutable audit trail — with Alembic-migrated PostgreSQL persistence and pytest coverage across feed contracts, scanner replay, and safety boundaries.

rkitect Marketing Automation — Autonomous Social Media Content Pipeline
Python, n8n, Gemini API, Apify, Buffer API, Multi-Agent Orchestration, Prompt Engineering

- Architected a 5-stage agentic pipeline (Researcher → Filter → Content → Image Gen → QA Agent) that autonomously generates and publishes brand-tailored posts across LinkedIn, Twitter, and Instagram, gated by an 85-point QA threshold.
- Brand context (voice, tone, product features) is loaded at runtime by each agent; a performance feedback loop reads engagement analytics to iteratively improve hook selection and content format.

JobIntel — B2B Hiring Intelligence Platform
React, FastAPI, PostgreSQL, SQLAlchemy, Alembic, APScheduler, Apify, Apollo.io, HubSpot API

- Full-stack B2B SaaS tracking ~980 job postings across 781 companies via Apify scrapers with automated daily ingestion, Apollo.io enrichment, and HubSpot CRM sync (Alembic-migrated PostgreSQL, batch upsert logic); delivered live to a recruitment client.

RAG Studio (PageIndex) — Full-Stack RAG Platform
React, FastAPI, PostgreSQL, Supabase, Gemini API

- Replaced vector similarity search with a deterministic hierarchical traversal engine using tree-based LLM reasoning and confidence scoring to reduce hallucinations.

EDUCATION

B.Tech — Computer Science (Artificial Intelligence), Manipal University Jaipur
2023 – 2027

CGPA: 9.0 / 10.0

Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Machine Learning, Deep Learning

Certifications: Machine Learning – NPTEL (Top 2% nationwide) | Database Programming with SQL – Oracle | Data Structures and Algorithms – CodeChef
